

# 3rd and 4th Grade Highlight

In last weeks STEM activity, 3rd and 4th graders were challenged to develop a plan, delegate tasks, and record observations and conclusions while building the highest free-standing structure possible using 100 plastic cups. They learned that patience and steady hands were vital to accomplish their goal. We continue to have lots of fun during our STEM time, as we also learn a lot about teamwork, cooperation, and communication.
